

Chief Executive Officer

Rethink Priorities

Rebenchmark as of August 17, 2026

Expanded evidence base

144 selected organizations

116 primary-use incumbent observations (79 structurally clean) | 15
current recruitment ranges

Advertise \$250K-\$340K base

Expected hire \$280K-\$320K | Successful incumbent base \$290K-\$350K |
Recurring total \$340K-\$435K

The original frozen benchmark remains visible as a baseline. These expansion waves are not blind to the original results; newly added candidates were frozen before systematic pay review. Not a legal opinion.

Executive findings

Decision use	Defensible 2026 range	Descriptive center	Interpretation
External recruitment posting	\$250K-\$340K base	\$295K	Expected hire zone \$280K-\$320K
Successful incumbent	\$290K-\$350K base	\$320K	Judgment anchored between ads and filing cash proxies
Recurring total compensation	\$340K-\$435K	\$385K	Supported by filing total proxies; low-to-moderate confidence

The expanded exercise materially improves sample breadth without converting a public-record convenience sample into a population percentile. The documented universe of 452 unique organizations (450 expansion candidates plus two legacy-only original-protocol peers) produced **144 selected organizations, 116 primary-use incumbent observations** (79 structurally clean), and **15** current advertised salary ranges. The conclusions remain ranges rather than salary-to-the-dollar estimates.

The forward-looking result remains led by the closest recruitment advertisements: their midpoint median is about **\$251K**, while the broader 15-ad midpoint median falls to about **\$216K** because it includes materially smaller and structurally different organizations. RP's international, distributed research organization; fundraising and board duties; and fiscal-sponsorship interface justify meaningful headroom above the observed close-peer midpoint.

The incumbent filing evidence is much broader than before. The all-primary cash/W-2 proxy median is about **\$301K**; the structurally clean median is **\$310K**; Tier A and expense-matched medians are approximately **\$332K-\$336K**. These are not exact base salaries. The selected incumbent-base center of \$320K sits between the broad/clean and highest-comparability evidence without treating taxable bonuses or other W-2 compensation as salary.

Total-proxy medians range from approximately **\$336K** in the broad primary sample and **\$360K** in the structurally clean sample to **\$376K** in Tier A and **\$376K** in the expense/headcount-available match. The \$340K-\$435K planning range covers the central high-comparability evidence while leaving unusual, one-time, deferred, severance, and relocation items outside the recurring range.

What changed from the original nine-organization benchmark

Item	Original result	Expanded rebenchmark	Interpretation
Candidate/reference breadth	9 strict-primary organizations	144 selected organizations; 452-name documented universe	Much lower dependence on any single organization
Incumbent evidence	6 strict filing peers	116 primary-use filing observations (79 structurally clean)	Original \$402K cash-proxy median falls to \$301K broad / \$332K Tier A
Recruitment evidence	3 strict; 6 current expanded	3 strict; 5 close; 15 current expanded	Closest ad center remains near \$251K
Advertised range	\$250K-\$330K	\$250K-\$340K	Essentially stable; modestly more upper-end headroom
Incumbent base	\$285K-\$340K	\$290K-\$350K	Center moves to \$320K, near clean expanded filing evidence

Item	Original result	Expanded rebenchmark	Interpretation
Recurring total	\$335K-\$435K	\$340K-\$435K	Center moves to \$385K, near Tier A/ close-scale total proxies

Evidence at a glance

Evidence view	n	Cash/base center	Total center	Use
Strict current job ads	3	\$251,000	-	Closest forward-looking salary evidence
Close title/scale job ads	5	\$251,000	-	Includes Dream.Org and Hagley as broader title/ scale comparators
Expanded current job ads	15	\$216,000	-	Shows effect of smaller/structurally different roles
All primary filing observations	116	\$301,000	\$336,000	Broad incumbent evidence
Structurally clean filings	79	\$310,000	\$360,000	Primary conservative center
Tier A filings	71	\$332,000	\$376,000	Best overall function/scale/structure matches
Expense + available-staff match	59	\$336,000	\$376,000	Expenses \$5M-\$20M and no known staff contradiction
Joint expense + known-staff match	17	\$301,000	\$335,000	Strictest scale view; smaller n
Exact Schedule J base	0	Not estimable	-	No exact-base observations; no imputation

1. Scope, independence, and completion status

Frozen sequencing

The second and third expansion waves added **290 candidates** to the previous 160-name universe, producing **450 frozen expansion candidates**. Two original-protocol peers - Niskanen Center and Results for America - were not duplicated into those files, so the documented universe contains **452 unique organizations**. The second wave was frozen at 2026-08-25T16:07:55-0700; the third at 2026-08-25T17:12:00-0700. The final three-wave universe SHA-256 is d84b6c772f8017bd4ddb8a4327012aabe40b6cd25198552558b4018f6c32e4c3. The two new-candidate files contain 145 organizations each and have SHA-256 values 9ed0ee56e13d29ea571124a8373d39e1d5d2b877d599e410f5c27d3b9ede68a8 and b0c04fb1cec71b2496da1d8ade07d74ebf14abc43f11dc7ede81581f3b3316cc.

This phase is **not blind to the original benchmark**. The analyst had already seen the original nine-peer pay observations and prior recommendation. That exposure is disclosed rather than ignored. The new candidate names, tier rules, and pay-measure rules were frozen before systematic review of their compensation; compensation could not be used to add, remove, promote, demote, or reweight an organization.

Source and archive limitation

Official-source limitation. Each filing row records the EIN, tax period, filing date, IRS object ID, canonical IRS XML URL, ProPublica navigation URL, extraction location, and arithmetic. This environment

could not reliably archive every complete source-native IRS XML/HTML file. The package therefore preserves hashed derivative snapshots and the complete extracted dataset, not a source-native copy of every return. Schedule J exact-base fields remain blank rather than imputed.

Requirement	Result
Documented universe	452 unique organizations: 450 expansion candidates plus 2 legacy-only original peers
Selected quantitative reference set	144 organizations: 79 Tier A, 39 Tier B, 26 Tier C
Primary-use incumbent observations	116; 79 structurally clean
Current quantitative job advertisements	15; preregistered target reached
Exact filing base salary	0 observations
Offline reproducibility	Complete for archived derivative data and calculations

2. RP role and scale anchor

The public RP profile is unchanged from the original benchmark. RP is treated as a distributed knowledge-production nonprofit with research, evidence synthesis, commissioned advisory work, open-access outputs, operational support for special projects, fiscal sponsorship, and limited regranting. The primary scale anchor remains approximately **\$7.5M of 2026 core budget, \$9.3M of identified productive-use capacity, and roughly 45-57 core staff**. Consolidated expense is retained as a sensitivity because it contains material sponsored-project and pass-through activity. [SRC-RP-ABOUT; SRC-RP-2025-RESULTS; SRC-RP-FUNDING; SRC-RP-SPECIAL-PROJECTS]

Dimension	Role-profile treatment
CEO structure	Solo, full-time, organization-wide CEO
Core responsibilities	Research/strategy, fundraising, board partnership, culture/talent, operations integration, and external representation
Primary scale	\$7.5M-\$9.3M core operating anchor; roughly 45-57 staff
Consolidated sensitivity	Approximately \$20.4M historical consolidated expense, not mechanically treated as core scale
Sponsored-project complexity	Material fiscal-sponsorship platform; complexity recognized without treating every pass-through dollar as core operations
Labor market	US national/remote knowledge-sector leadership, with high-cost-hub competition and international team complexity

3. Expanded reference-set method

The expanded reference set emphasizes functional similarity, operating scale, headcount, effective-altruism affinity, clean top-executive structure, and national labor-market relevance. Cause-area familiarity alone is not sufficient. Grantmaking-dominated, field-delivery-dominated, university-parent, fiscal-host, affiliate, co-CEO, interim, partial-year, and unclear-top-executive cases are either down-weighted, placed in Tier C, or excluded from primary compensation summaries.

Tier	Selected n	Rule of use
A	79	Strong function/scale/structure match; principal expanded peer tier
B	39	Useful peer with one meaningful scale, model, geography, or structure deviation
C	26	Broad robustness sensitivity; not allowed to dominate the headline

The selected 144 organizations include **116 with primary-use incumbent compensation observations**, of which **79 are structurally clean** under the preregistered classification. The remaining selected organizations still contribute to peer-definition and coverage analysis but are not silently assigned compensation. One observation per legal organization is used.

Selected reference set - representative row-level evidence

4. Current recruitment evidence

Recruitment advertisements are the forward-looking evidence stream. They are analyzed separately from incumbent tax-return compensation. The close five-ad set has a midpoint median of approximately \$251K. The full fifteen-ad set centers around \$216K because it intentionally includes smaller, remote, fiscally sponsored, dual-entity, and other structurally broader comparisons.

View	n	Observed envelope	Midpoint median	Range overlap
Strict primary	3	\$199,000-\$300,000	\$251,000	No exact CPI-adjusted overlap
Close title/scale	5	\$199,000-\$300,000	\$251,000	No exact overlap
Expanded current	15	\$110,000-\$300,000	\$216,000	No common overlap

Organization	Role	Posted	Location/mode	Jul-26 min	Jul-26 max	Tier	Source

The closest ads do not support treating the \$340K posting ceiling as an observed median or percentile. It is deliberate search headroom for RP's broader role. The lower bound remains near the strict-ad center; the expected-hire zone is the portion of the range most consistent with current observable postings.

5. Incumbent Form 990 evidence

Part VII reportable compensation from the organization plus related organizations is treated as a **cash/W-2 proxy**, not exact base salary. Part VII other compensation is reported separately. Filing total proxy equals cash proxy plus Part VII other compensation where Schedule J total is unavailable. No uniform benefits percentage is used, and no base is reverse-engineered from total compensation.

Sample	n	Cash Q1	Cash median	Cash Q3	Weighted cash median	Total median
all primary eligible	116	\$237,000	\$301,000	\$414,000	\$303,000	\$336,000
structurally clean	79	\$248,000	\$310,000	\$409,000	\$311,000	\$360,000
tier A	71	\$253,000	\$332,000	\$445,000	\$332,000	\$376,000
expense and available staff match	59	\$255,000	\$336,000	\$446,000	\$336,000	\$376,000
joint expense and known staff match	17	\$252,000	\$301,000	\$395,000	\$301,000	\$335,000
EA core or adjacent	67	\$225,000	\$268,000	\$352,000	\$271,000	\$295,000
functional only	49	\$253,000	\$350,000	\$511,000	\$350,000	\$408,000
excluding predeclared unusual structures	109	\$231,000	\$291,000	\$382,000	\$292,000	\$322,000

The largest systematic split is **EA adjacency versus functional-only peers**. EA-core/adjacent organizations center at roughly \$268K cash proxy and \$295K total proxy, while functional-only research/policy/philanthropy-infrastructure organizations center at roughly \$350K and \$408K. This is not interpreted causally: the groups also differ in age, geography, title mix, funding model, and organizational maturity.

The close-scale leave-one-organization-out test is stable relative to the original six-filing sample: the cash median ranges only from approximately **\$341K to \$347K**, and the total median from **\$380K to \$388K**. The expansion substantially reduces dependence on any single filing.

6. Sensitivity and uncertainty

Sensitivity	n	Cash median	Total median
remove EA-core/adjacent	49	\$350,000	\$408,000
remove functional-only	67	\$268,000	\$295,000
remove above-\$20M expenses	96	\$290,000	\$314,000
remove below-\$5M expenses	85	\$336,000	\$376,000
remove founders	103	\$301,000	\$336,000
remove older compensation years	104	\$304,000	\$338,000
remove predeclared unusual structures	109	\$291,000	\$322,000

Key implications:

- **Peer definition:** Broadening from Tier A to all primary observations lowers the cash center from about \$332K to \$301K. Smaller or more delivery-oriented organizations pull down the broad center.
- **EA weighting:** Greater weight on EA-core/adjacent peers supports a lower center; stronger weight on title- and function-matched policy/research institutions supports a higher center.
- **Scale:** Excluding organizations below \$5M of expense raises the cash median to about \$345K. Consolidated-scale comparisons should therefore affect the upper end more than the central estimate.
- **Title:** CEO-titled observations center around \$331K cash proxy versus about \$267K for ED/President observations. Title is correlated with organization maturity and scope and should not be treated as a pure title premium.
- **Evidence type:** Close advertisements center at \$251K base; filing cash proxies center around \$301K-\$336K; total proxies center around \$336K-\$376K. Pooling them would be a category error.
- **Geography:** Public records do not permit a stable independent remote-versus-hub premium after controlling for role, scale, and topic.

7. Direct decision answers

1. What should RP advertise externally?

\$250K-\$340K annual base salary, presented as a national, experience-sensitive range. The descriptive center is **\$295K**, and the most likely offer zone is **\$280K-\$320K**. The upper end is search headroom, not an observed percentile.

2. What base salary is defensible for a successful incumbent?

\$290K-\$350K, with a descriptive center near **\$320K**. The lower half is consistent with EA-adjacent and broad primary evidence; the upper half is more defensible for sustained organization-wide performance, fundraising, research quality, organizational health, and effective management of the core/sponsored-project interface.

3. What recurring total compensation range is supported?

\$340K-\$435K, centered descriptively around **\$385K**, with low-to-moderate confidence. This is supported by the Tier A and expense/headcount-available total-proxy medians near \$376K and \$376K, and the functional-only median near \$408K. The strict joint expense-and-known-staff subset is lower and is reported separately.

Exceptional incentives, one-time transition payments, severance, relocation, and unusual deferred compensation remain outside the recurring range.

4. How sensitive is the conclusion?

The posting recommendation is moderately sensitive to whether smaller/structurally different ads are included; the incumbent and total centers are highly sensitive to EA affinity, title mix, and scale band. The large expanded sample makes the result far less sensitive to any single organization, but it does not eliminate nonrandom peer selection or measurement differences.

5. What cannot be estimated reliably?

A precise population percentile; exact base salary from the filing sample; a stable geographic premium; the recurring bonus target; employer health and retirement cost; deferred-compensation value; candidate-specific scarcity or retention premiums; and a clean dollar value for RP's fiscal-sponsorship complexity cannot be estimated reliably from the public evidence.

8. Quality control and reproducibility

Run `./reproduce.sh` from the package root. It rebuilds normalized evidence, statistics, charts, the report, workbook, source manifest, hashes, and validation report from archived local inputs. Validation fails on missing required fields, inconsistent arithmetic, duplicate primary organization observations, checksum mismatch, or report/statistic mismatch.

Control	Validation
Candidate freezes	Verify both 145-name additions, the 450-name three-wave universe, and the original frozen legacy bridge
One observation per organization	Require unique organization in primary filing sample
Filing arithmetic	Cash = Part VII organization + related; total = cash + other
Cutoff	Require filing date no later than 2026-08-17 for primary observations
Measure separation	Exact base, cash proxy, other, and total remain distinct
Statistics	Independent validation recomputes counts, medians, quartiles, weights, and leave-one-out ranges
Artifacts	Manifest checks every local path, byte count, and SHA-256

Appendix B. Definitions

Term	Meaning
Base salary	Annual fixed cash salary stated in a posting or separately disclosed in Schedule J
Cash/W-2 proxy	Part VII reportable compensation from organization plus related organizations; may include taxable bonus or other items
Other compensation	Part VII column F or separately disclosed deferred/nontaxable items
Filing total proxy	Cash/W-2 proxy plus Part VII other compensation when Schedule J total is unavailable
Market center	Descriptive decision anchor, not a population percentile
Core scale	Operating responsibility excluding separable sponsored-project/pass-through flows
Selected reference set	Organizations selected on frozen function, scale, headcount, EA affinity, structure, and geography criteria; not all have usable pay

Benchmark cutoff: August 17, 2026. **Expansion freezes:** August 25, 2026. **No legal opinion.**
